EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Kyle J. Way (Reg. No. 45,549) on 27 February 2008.
3. All of the amendments are highlighted with strikethrough or double brackets for deletions and underlining for added language. The application has been amended as follows:
 - a. Claim 21 (renumbered as claim 3): The method of claim 19, further comprising [[the]]a step of architecting data from the first cluster to a first register file.
 - b. Claim 22 (renumbered as claim 4): The method of claim 19, further comprising [[the]]a step of architecting data from the second cluster to a second register file.
 - c. Claim 31 (renumbered as claim 9): A processor, comprising:
 - i. A first cluster and a second cluster, wherein each of the first cluster and the second cluster comprises a plurality of execution units, wherein each of the execution units is configured to process instructions;
 - ii. A configuration bit configured to specify a mode of operation, wherein the mode of operation comprises one of a throughput mode and a wide mode; and
 - iii. A thread decoder configured to group instructions of a multiply-threaded program into singly-threaded bundles and to distribute the bundles to the

first cluster and the second cluster according to a state of the configuration bit;

- iv. Wherein during the throughput mode, the thread decoder is configured to distribute ~~[[the]]~~ bundles of a first thread and a second thread to the first cluster for processing, and to distribute ~~[[the]]~~ bundles of a third thread and a fourth thread to the second cluster for processing, wherein the first thread, the second thread, the third thread, and the fourth thread are executing simultaneously; and
- v. Wherein during the wide mode, the thread decoder is configured to distribute ~~each of the bundles of a fifth thread to exactly one of the first cluster and the second cluster for processing~~ a first plurality of bundles of a fifth thread to only the first cluster for processing and a second plurality of bundles of the fifth thread to only the second cluster for processing.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance: The claims now recite the limitations, taking claim 31 (renumbered as claim 9) as exemplary,

- a. Wherein during the throughput mode, the thread decoder is configured to distribute bundles of a first thread and a second thread to the first cluster for processing, and to distribute bundles of a third thread and a fourth thread to the second cluster for processing, wherein the first thread, the second thread, the third thread, and the fourth thread are executing simultaneously; and

- b. Wherein during the wide mode, the thread decoder is configured to distribute a first plurality of bundles of a fifth thread to only the first cluster for processing and a second plurality of bundles of the fifth thread to only the second cluster for processing.

5. These limitations, in combination with the other limitations in the claim, are not taught in the art. Most prior art searched and found by the Examiner describing similar multi-threaded and single threaded hybrid environments, such as Leibholz et al., U.S. Patent Application Publication 2003/0033509 and U.S. Patent Number 6,954,846, teach, when in multi-thread mode, sending individual, independent threads to separate clusters, not sending multiple threads to separate clusters for simultaneous execution, and, when in single thread mode, sending the single thread to a single cluster, not sending separate instructions bundles from the single thread to multiple clusters. Other prior art searched and found by the Examiner describe a single thread environment that either sends separate instruction bundles from a single thread to the multiple execution clusters for simultaneous execution or send the same bundle from the single thread to the multiple execution clusters, not sending instruction bundles from multiple threads to one execution cluster and instruction bundles from other threads to a second execution cluster for simultaneous execution.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
